

A sturdy hose washing machine suitable for cleaning fire hose up to a diameter of 90 mm.

The hose washing machine attachment permits thorough, yet protective washing without brushing of fire hoses. Two cone shaped pressure jets are washing the hose twice during each application. The impact of the pressure jets from two annular gaps imparts a forward movement to the hose. The hose washing attachment requires only normal pipeline pressure.

Manufactured in light-weight aluminium, comes complete with a 70 mm male instantaneous adaptor inlet.

SKU:8070

SPECIFICATIONS:
