## Mobile Double Extinguisher Trolley

Compatible with 9kg / 9Litre Fire Extinguishers

The Mobile Extinguisher Trolley is a highly efficient safety solution designed for environments where quick mobility and large extinguishing capacity is essential. Unlike standard handheld extinguishers that need to be carried individually, this trolley-mounted system allows two high-capacity extinguishers—such as dry powder and foam units—to be transported together with ease. This setup enables users to respond rapidly to emerging fire threats without struggling with heavy cylinders or making multiple trips to retrieve different units.

The trolley is engineered for durability and long-term performance in demanding conditions. Its frame is constructed from high-strength steel and finished with a protective powder coating, which enhances resistance to corrosion, impact, and harsh weather exposure. This makes it ideal for industrial facilities, warehouses, construction sites, fuel storage areas, aviation environments, and large outdoor venues.

Ergonomic handles and heavy-duty wheels ensure smooth manoeuvrability across indoor floors and rough outdoor terrain allows a single operator to deploy the system quickly, even in urgent situations. Secure mounting brackets hold the extinguishers firmly in place while still allowing fast release during operation. The platform base provides stability while the unit is in motion or during use. By combining high mobility, robust construction, and the ability to carry two extinguishers at once, this fire extinguisher trolley offers a practical and reliable first-response solution for high-risk settings where fast action can make a critical difference.
